

MAP I

The MAP I is the classical Home-Entertainer from Audionet. Whether stereo or surround sound, the tonal performance is commended by all who have enjoyed the product's authentic listening experience. The high quality sound resonates with the listener as realistic and dynamic, and creates the illusion of being part of a live performance as a result of the energy and excitement produced by the MAP I.

The Audionet HighBit interface allows the use of high-definition DVD audio and SACD by processing the classical home cinema formats. The unique delay, loudspeaker, and bass management can be freely adjusted in all parameters, allowing the optimal configuration of every loudspeaker ensemble. Consequently, it is equipped with a phenomenal parametric equalizer, compensating for any interference in the room. Audionet's Intelligent

Sampling Technology and "Double Precision Bass Management" guarantees an exceptional tonal outcome. The USB interface makes the tone quality available to the digital world and the optional high quality phono module allows records to be played in surround sound.

The four-line display is equipped with an on-screen menu that makes for an easy-to-use, intuitive operating experience. The MAP I analyzes all signals and selects the correct settings automatically. The Audionet HighBit interface receives high-resolution DVD Audio, SACD, and multichannel data to be processed by the Bass Management and Equalizer. Audionet's analysis and correction software CARMA allows these audio formats to be replayed with impeccable quality.
